Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 3-4, 7-11, 16, 18, 22, and 27, and claims 1-2, 13-15, 20-21, and 24-26 in part, drawn to mptbA nucleic acids (including SEQ ID NOS 15, 11, 13, "pAK A" and the primers of SEQ D NOS 1-4) and methods employing them.

Group II, claim(s) 5-6, 12, 17, 19, 23, and 28, and claims 1-2, 13-15, 20-21, and 24-26 in part, drawn to mptbB nucleic acids (including SEQ ID NOS 16, 12, 14, "pAK B" and the primers of SEQ D NOS 5-8) and methods employing them.

It is noted that **claims 5-6** have been placed in Group II because the recitation of "SEQ ID NO: 15" in the claims (rather than SEQ ID NO: 16) appears, based on the teachings of the specification, to be a typographical error.

2. The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons. Each of Groups I-II are directed to nucleic acids and mutant bacterial strains comprising modified tyrosine phosphatase genes, as well as primers for amplify such genes and methods of preparing such mutant bacterial strains. However, Group I is directed to mutant mptpA genes while Group II is directed to mutant mptpB genes; i.e., the genes of the 2 inventions differ from one another in sequence/structure and functional characteristics (e.g., note that the group of mptpA sequences of Group I differ from the group of mptpB

Art Unit: 1634

sequences of Group II). As the genes/sequences of Groups I and II differ, these genes/sequences are not a shared technical feature. Other technical features shared by Groups I-II, such as cloned tyrosine phosphatase genes, mutations thereof, vectors and bacteria comprising such genes and methods of their preparation, etc., were known in the prior art as exemplified by Koul et al (Journal of Bacteriology 182(19):5425-5432 [2000]; enclosed herewith). As Groups I-II do not share any technical feature that makes a contribution over the prior art, unity of invention is lacking.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
